multilocational teamwork _ Educational Advanced Support Tools
Projectmanagers: Dr. Gianni Birindelli

What's it about: mt_EAST is a course supported with new communication technologies. We focus on a “remote collaboration”, with students, assistants and tutors from different universities, that is based on the principal of tutorial studying attendance.

The in practice usual division of a project between the project managing architects and the executing expert planners is simulated. The communication takes place via “remote collaboration, that means a video/audio conference with a white-board-drawing-tool, based on the Internet. An electronically conference-table enables the accomplishment of “remote seminars”

The main objective is to give students a hands-on experience in a practice-like environment, learning how to work in a team and to get used with the new media.

What we search/offer: for the autumn term 2009 and spring term 2010 we offer students around the world the unique opportunity to participate in a remote teaching semester or a workshop with students and the chair of civil engineering of the ETH Zürich.

We offer the following scenarios:

Design-students from your university are, during one semester being supported by students and the chair of civil engineering from the ETH Zürich, developing a supporting structure.

An intensive workshop to consolidate the understanding of supporting structure and develop a project towards realization.

We are open for new ideas and scenarios. We hope that you found some interest in the project and we would look forward too here from you.
