The colonisation of India by the British coincided with major changes in the world economy - industrialisation and significant growth in production and trade. However, at the end of colonial rule India inherited an economy that was one of the poorest in the developing world with industrial development stalled, agriculture unable to feed a rapidly growing population, one of the world's lowest life expectancies as well as low rates of literacy.

After the independence Indian policy tended towards protectionism, with a strong emphasis on import substitution, industrialisation, state intervention in labour and financial markets, a large public sector, business regulation and central planning.

Today India has become an important player in the world economy. Big companies like Tata and the growing IT sector contribute to a successful economy. Even India ranks second worldwide in farm output the „tertiary sector“ has the largest share in the GDP, accounting for 55% in 2007 up from 15% in 1950.
